Chem. 122, Sect 007,

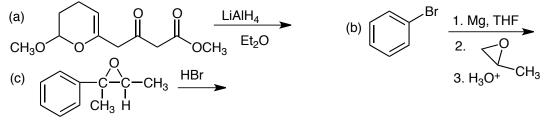

HO/

Exam 2, 150 pts, Spring, 2011

1. For the following molecule, predict (a) the number of carbon signals (b) the number of proton signals and their multiplicities and (c) give three significant IR absorptions and indicate what functional group each absorption each corresponds to. (15 pts)

2. Name the following molecules. (15 pts)

 $\begin{array}{c|cccc} OH & O & O & O & CH_2CH_3\\ (a) CH_3-CH-CH=CH-C-OH & (b) H-C-CH_2CH_2-C-CH_3 & (c) CH_3CH_2-C-CH_2-CH-CH_2CH_2CH_3\\ 3. Give the product of the following reactions. It is not necessary to show the reaction mechanism but do show all intermediates formed. (30 pts, 10 pts each) \end{array}$

4. Look at the following pairs of molecules and in each case choose which is the stronger acid of that pair and briefly explain your reasoning. (15 pts)

(a)
$$\mathbf{A} CH_3 CF_2 CH_2 - C - OH$$
 B $CH_3 CH_2 CF_2 - C - OH$ (b) **C** $CH_3 O - C - OH$ **D** $HOCH_2 - C - OH$

5. Show how the following transformations occur, giving all of the steps of the mechanisms. No other reagents are needed except those given. (45 pts)

6. Synthesize **two** of the following **three** molecules from the starting materials given on the left as shown. Do all **three** for extra credit. (30 pts)
