

ACID XPress Checklist

Here is a list of basic ACID XPress skills you should know:

1. Run ACID XPress
2. Open project or create new project
3. Locate loops folder and navigate around it
4. Set project tempo and key
5. Preview loops and stop preview playback
6. Create new loop track
7. Enable snapping and set snap grid resolution
8. Draw loop
9. Change loop length
10. Change loop starting position
11. Move loop
12. Use the play/stop/rewind buttons (also use the spacebar to start/stop playback)
13. Change the playback starting position (i.e. move the cursor)
14. Set volume for a track
15. Set pan for a track
16. Solo a track
17. Mute a track
18. Set project volume to avoid distortion and clipping
19. Insert a Marker
20. Insert a Tempo/Key Change
21. Raise or lower the pitch of a clip
22. Save project file as a normal project or an acid-zip file
23. Render project as an audio file
